

JOURNEY STAGES	1. AWARE	2. ENTER DATA	3. PROCESSING	4. GET RESULT	5. TAKE ACTION	6. FEEDBACK
STEPS What does the farmer do at this stage?	Farmer learns about OptiCrop and decides to try it.	Farmer enters soil and environment parameters in the system.	System validates input and processes data using ML model.	System shows the most suitable crop and suitability score.	Farmer uses the recommendation for decision making.	Farmer provides feedback and uses again for better results.
GOALS & MOTIVATIONS What is the farmer trying to achieve?	Find a reliable solution to choose the best crop and improve yield.	Get accurate analysis based on my field conditions.	Get quick and accurate recommendation.	Understand the best crop option and suitability details.	Make confident decisions to increase productivity and profit.	Improve results over time and help the system become better.
EMOTIONS What is the farmer feeling?	Curious and hopeful	Focused and expecting accurate results	Hopeful and trusting the system	Satisfied and confident (if result is useful)	Empowered and determined	Satisfied and loyal
PAIN POINTS What challenges does the farmer face?	Not sure if the system will be useful.	Not knowing exact values of some parameters.	Worried if the data is correct / complete.	May not understand the technical terms.	Other factors (market, pest, cost) also affect decisions.	May forget to provide feedback.
OPPORTUNITIES How can we improve the experience?	Create awareness through local language, videos, and demos.	Provide input tips, ranges, and examples. Support auto-fetch weather data.	Show validation messages, loading indicator and process transparently.	Provide easy-to-understand results with reasons, charts and tips.	Provide crop management tips, market info and cost estimation.	Send reminders for feedback and improve recommendations.
